

JAI HARI NATARAJ S

9843273540 | sjaiharinataraj@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

IBM Certified Data Analyst with hands-on experience transforming raw, structured datasets into actionable insights using Python, SQL, and EDA. Skilled in uncovering trends and performance drivers through KPI analysis, statistical modeling (Linear & Logistic Regression), and data visualization. Communicates findings clearly through interactive dashboards and reports built in Power BI and Excel.

TECHNICAL SKILLS

Programming & Query Languages: Python, SQL

Data Analysis & Libraries: Pandas, NumPy, Matplotlib, Seaborn, scikit-learn, Exploratory Data Analysis (EDA), Statistical Analysis, Predictive Modeling

BI & Reporting: Power BI (Dashboard Development, DAX, Data Modeling, Power Query), Microsoft Excel (Pivot Tables, VLOOKUP/XLOOKUP, Power Query, Conditional Formatting, Charts, Visualizations, Data Validation)

Version Control & Collaboration: Git, GitHub (Version Control, Branching, Pull Requests, Code Review)

PROJECTS

Tamil Nadu SIR 2026 Draft Voter Roll Impact Analysis [View](#)

Tools: Python, SQLite, Pandas, NumPy, Matplotlib, scikit-learn, Web Scraping, Excel

- Analyzed electoral roll changes across 234 constituencies using large public datasets and identified a net removal of nearly 97 lakh voters after SIR 2026.
- Classified about 68% of constituencies as high or critical impact by comparing voter removals with election victory margins and validated results using Logistic Regression with nearly 98% accuracy.

Zomato Restaurant Data Analytics - Customer Behavior Analysis [View](#)

Tools: Python, Pandas, NumPy, Matplotlib, Seaborn

- Conducted analysis on 148 Zomato restaurant records to evaluate customer preferences, restaurant categories, pricing ranges, and ordering behavior.
- Identified that restaurant ratings were concentrated between 3.5 and 4.0, online-order restaurants received higher average ratings, and most couples preferred mid-range restaurants priced around 300 rupees.

End-to-End Customer Churn Analysis for Bank Customers [View](#)

Tools: Power BI (Power Query, DAX), Data Modeling (Star Schema), Microsoft Excel, CSV

- Analyzed churn patterns for about 10,000 bank customers and calculated an overall churn rate of 20.4% using KPI metrics and data modeling.
- Identified high-risk customer segments based on age, credit score, balance, activity level and presented insights through data-driven storytelling using an interactive Power BI dashboard.

EDUCATION

Bachelor of Engineering (EEE) CGPA: 8.82 | 2020 - 2024

AAA College of Engineering and Technology (Anna University)

CERTIFICATIONS

- IBM Certified Data Analyst Professional Certificate [View](#)
- Databases and SQL for Data Science – IBM [View](#)
- Data Visualization and Dashboards – IBM [View](#)

ACHIEVEMENTS

- Secured 1st Rank in Semester Examinations of the Anna University (2022 - 2023).
