PROFESSIONAL SUMMARY

A Data Analyst with hands-on experience transforming raw, structured datasets into actionable insights using Python, SQL, and EDA. Skilled in uncovering trends and performance drivers through KPI analysis, statistical modeling (Linear & Logistic Regression), and data visualization. Communicates findings clearly through interactive dashboards and reports built in Power BI and Excel.

TECHNICAL SKILLS

Programming & Query Languages: Python, SQL, **Data Analysis & Libraries:** Pandas, NumPy, Matplotlib, Seaborn, scikit-learn, Exploratory Data Analysis (EDA), Statistical Analysis, Predictive Modeling

BI & Reporting: Power BI (Dashboard Development, DAX, Data Modeling, Power Query), Microsoft Excel (Pivot Tables, VLOOKUP/XLOOKUP, Power Query, Conditional Formatting, Charts, Visualizations, Data Validation)

Version Control & Collaboration: Git, GitHub

PROJECTS

Wind Turbine SCADA Performance Analytics | Tools: Power BI, Power Query, DAX, Excel

github.com/jaiharinataraj/Wind-Turbine-SCADA-Performance-Analytics

- Recovered visibility into 1.55M kWh of energy loss by converting 50,000+ raw SCADA records into an executive Power BI dashboard, giving operators a single source of truth for turbine performance.
- Pinpointed November as peak efficiency month at 91.82% capacity factor through 12-month power curve analysis, enabling data-driven maintenance scheduling decisions.

Wind Farm KPI & Contractual SLA Monitoring System | Tools: Microsoft Access, Excel

github.com/jaiharinataraj/Wind-Farm-KPI-Contractual-SLA-Monitoring-System

- Eliminated manual SLA tracking across 5 wind farm sites by automating 60 months of compliance calculations, reducing breach detection from days to instant alerts.
- Flagged contract penalty risk at 3 out of 5 sites by revealing that turbines were available but still missing production targets in May 2025, a gap that availability tracking alone would have overlooked.

Zomato Customer Behavior Analysis | Tools: Python, Pandas, NumPy, Matplotlib, Seaborn

github.com/jaiharinataraj/Zomato-Restaurant-Data-Analytics-Customer-Behavior-Analysis

- Conducted analysis on 148 Zomato restaurant records to evaluate customer preferences, restaurant categories, pricing ranges, and ordering behavior.
- Identified that restaurant ratings were concentrated between 3.5 and 4.0, online-order restaurants received higher average ratings, and most couples preferred mid-range restaurants priced around 300 rupees.

End-to-End Customer Churn Analysis for Bank Customers

Tools: Power BI, Power Query, DAX, Data Modeling - Star Schema, Microsoft Excel, CSV

github.com/jaiharinataraj/Customer-Churn-Analysis-for-Bank-Customers

- Analyzed churn patterns for about 10,000 bank customers and calculated an overall churn rate of 20.4% using KPI metrics and data modeling.
- Identified high-risk customer segments based on age, credit score, balance, activity level and presented insights through data-driven storytelling using an interactive Power BI dashboard.

EDUCATION

Bachelor of Engineering (EEE) CGPA: 8.82 | 2020 - 2024

AAA College of Engineering and Technology (Anna University)

CERTIFICATIONS - Verify credentials: [credly.com/users/jaiharinataraj/badges/credly](https://www.credly.com/users/jaiharinataraj/badges/credly)

- IBM Certified Data Analyst Professional Certification
- Databases and SQL for Data Science - IBM
- Data Visualization and Dashboards - IBM
